

## Vertical or Horizontal installation Factory or on-site welding

“ Built to hy gen...”

Stainless Steel tanks are highly recommended and the most ideal for potable water storage, where the purity of water is maintained forever. 100% maintenance free and it does not require any painting / coating / rubber lining. Tanks are delivered as fully assembled.

Tanks are in standard design or custom made to satisfy your process, mixing, and storage needs. Built from AISI 304 stainless steel, can be easily adapted to meet your dimensional requirements. All standard sizes have optional features that allow for made-to-order applications.

Food Grade - Stainless steel is a food grade material. Bacteria generation and germ growth are prevented, because the light can not penetrate the tank body, and the surface of the sheet is very smooth.

Heat resistant - will not warp or deform under direct sunlight.

No temperature rise of stored water by sunlight due to mirror finish material.

Leak proof - longer life span makes it one time investment.

Unique design - prevents insects from entering & contaminating the water.

The material of construction is the most preferred material for use in the Food & Pharma Industries.

Does not rust or corrode hence water is hygienically clean.

Light weight & easy to install in the long run saves money.

Ideal for storage of potable water used in residential & commercial

The discharge point is located at the bottom of the tank.

Available in different capacities ranging from 250 ltrs. to 3000 ltrs

5 years warranty.
